

Fra DrayTek vedr. Meltdown og Spectra sikkerheds issue

Recently there are some reports about CPU security issue known as Meltdown (CVE-2017-5754) and Spectre (CVE-2017-5753, CVE-2017-5715) that will lead to the leakage of information from memory. We also received some concerns from DrayTek partners and users whether DrayTek devices are affected by these attacks. Fortunately the reported affected CPUs are not used in DrayTek products. We are free from this vulnerable issue. For more details you may check below.
